after two hours, if you're in prison and for which you've been sentenced to 10 years, if you agree to cooperate with law enforcement in solving crimes that are in progress or have already been solved, these crimes can be reduced up to 10 years. What is the goal? To give the criminals a lighter sentence and the common goal is to get out of jail. Q: How do I use an AJAX POST with Django? I am trying to use ajax to submit a form, and then once its completed, it will load the response from the server in another part of the same window. So far, I have this: `$.ajax({ type: 'POST', url: '/newPage', data: $(this).serialize(), success: function(data){ $('#results').html(data); } });` In my template I have this: Submit I then have a view that is supposed to be handling this request: `def newPage(request): if request.method == 'POST': name = request.POST['name'] desc = request.POST['description'] if name!= None: newPage = NewPage(name=name, description=desc) newPage.save() return HttpResponseRedirect(newPage.id) return HttpResponseRedirect('heyyy')` The problem is, if I run this code, I never actually get the response from the server. Any thoughts? A: You're using \$.ajax, but you 82157476af
